Environment III | narrow passage and four active-arm role changes

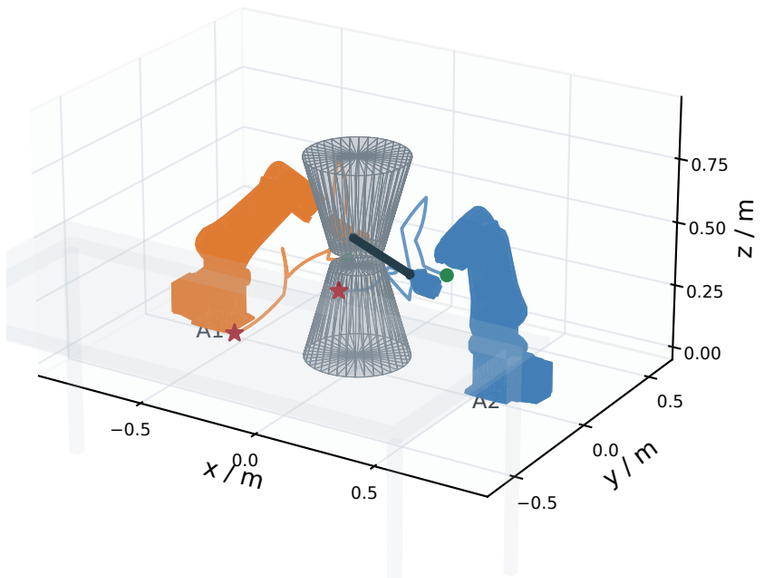

start | node 1/649

active A1; passive A2

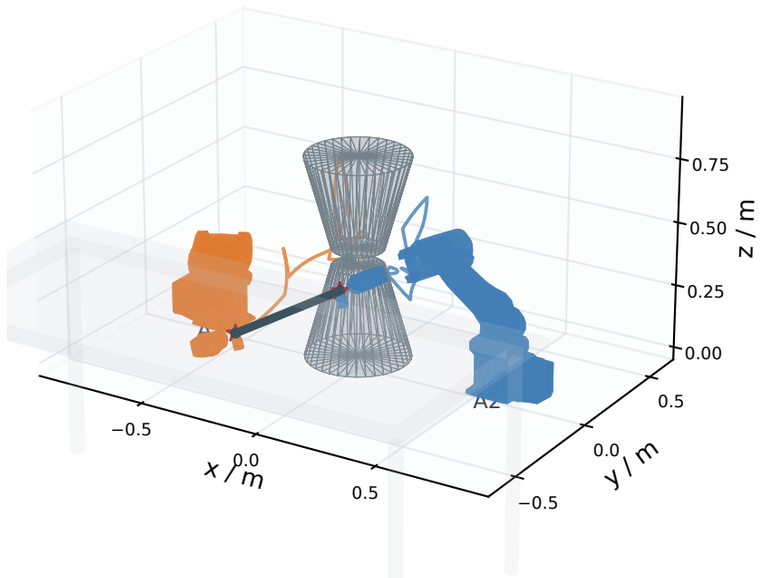

saved midpoint | node 325/649

active A1; passive A2

goal | node 649/649

active A1; passive A2

Original lower cone: identity. Original upper cone: Rx=3.14, z=0.790 m. Base separation: 1.200 m. Bar: 0.500 m.

Saved evidence: closure max 4.55e-13 mm; rotation matrix max 4.47e-15; 649/649 aligned TCPs pass; 0/649 native TCPs pass.

Four role changes show the mechanism on this final path. A performance advantage over compatible fixed PCS or NR is not established.

Aligned reconstructed discrete source collision policy only. Transparency aids visibility; no clearance or continuous CCD certificate.
